

Mini Stretch Wrap & Tape Repair Kit

Mini Stretch Wrap & Tape Repair

This repair kit can be used to seal a hatch or leaking skeg box.

Contents:

- 1 Mini stretch wrap
- 2 J-cloth
- 3 Self-amalgamating tape
- 4 Cable ties

Mini Stretch Wrap Repair

This repair can be done in-water or on a wet boat and can be used to seal a hatch area or a leaking skeg box.

Caution

Mini stretch wrap is a great temporary repair, but it is delicate material (stronger than cling film) so take care when launching/landing or rock-hopping.

- 1 Take the Mini Stretch Wrap and place next to the skeg box/hatch area which is to be covered.

Wrap around the kayak, pulling tight to make a good seal.

Allow a good margin beyond the hatch/skeg box; ideally the width of the wrap.

- 2 Continue to wrap around (ideally a minimum of 6 wraps), to ensure a good seal and increased strength.

Self-amalgamating Tape Repair

This is a rubberised tape that stick to itself very well when secured under a small amount of tension (like handlebar or racket handle tape).

This type of tape is ideally suited for an internal skeg box repair, where the outer plastic/nylon sheath/cable cover has become detached from the skeg box/union.

- 1 Peel apart the end of the tape from the backing strip.

- 2 Place the end of the tape on the cable sheath.

Keeping tension in the tape, wrap it around, making sure the tape overlaps on itself by about half its width.

Continue until the whole of the area is encapsulated.

Cable Ties

Useful items for repairing broken foot rests, deck fittings etc. Join them together 'Daisy Chain' fashion to make a longer version.
